Facebook AI
EMNLP2020

NLP at Facebook AI

Our team advances the state of the art in natural language understanding and generation, and deploys these systems at scale to break down language barriers, enable people to understand and communicate with anyone, and to provide a safe experience—no matter what language they speak.

The opportunities and challenges of this work are immense. Billions of people use our services to connect and communicate in their preferred language, but many of these languages lack traditional NLP resources and our systems need to be robust to the informal tone, slang and typos often found in daily communication.

Our research spans multiple areas across NLP and machine learning, so Facebook AI is hiring researchers & engineers in the following domains: Question Answering, Information Extraction, Representation Learning, Dialogue and Interactive systems, Machine Translation, Speech, Language Generation, Cross-lingual and cross-domain transfer learning, Low-resource NLP, Deep learning/neural networks, Semantics, Language Understanding, and Linguistics

Interested in Opportunities? Let's Connect.

PhD Internships
If you are currently pursuing a PhD and looking for internship opportunities in 2021, please contact: Janelle Battad - jbattad@fb.com

University Grad PhD & Postdoctoral Opportunities
If you are nearing the end of your PhD or postdoctoral program and looking for full-time opportunities, please contact: Danny Song - dsong@fb.com

Engineering & Research Industry Professionals
If you are currently working within the industry and are looking for new opportunities, please contact: Chris Chen - cyc@fb.com
